## MAX31856 Digital Thermocouple Module

MAX31856 performs cold-junction compensation and digitizes the signal from any type of thermocouple. The output data is formatted in degrees Celsius. This converter resolves temperatures to 0.0078125°C, allows readings as high as +1800°C and as low as -210°C (depending on thermocouple type), and exhibits thermocouple voltage measurement accuracy of ±0.15%. The thermocouple inputs are protected against overvoltage conditions up to ±45V.

A lookup table (LUT) stores linearity correction data for several types of thermocouples (K, J, N, R, S, T, E, and B). Line frequency filtering of 50Hz and 60Hz is included, as is thermocouple fault detection. A SPI-compatible interface allows selection of thermocouple type and setup of the conversion and fault detection processes.

## **Benefits and Features:**

- ~ Provides High-Accuracy Thermocouple Temperature Readings
- ~ Includes Automatic Linearization Correction for 8 Thermocouple Types
- $\sim$  ±0.15% (max, -20°C to +85°C) Thermocouple Full-Scale and Linearity Error
- ~ 19-Bit, 0.0078125°C Thermocouple Temperature Resolution
- ~ Internal Cold-Junction Compensation Minimizes System Components
- ~ ±0.7°C (max, -20°C to +85°C) Cold-Junction Accuracy
- ~ ±45V Input Protection Provides Robust System Performance
- ~ Simplifies System Fault Management and Troubleshooting
- ~ Detects Open Thermocouples
- ~ Over- and Undertemperature Fault Detection
- ~ 50Hz/60Hz Noise Rejection Filtering Improves System Performance

## Add the MAX31856 library to My Documents> Arduino> libraries

```
#include <MAX31856.h>
// This sample code works with this breakout board:
// http://www.ebay.com/itm/301671408961 (5V)
// http://www.ebay.com/itm/301671398870 (3.3V)
//
// The power requirement for the board is less than 2mA. Most microcontrollers can source
or sink a lot more
// than that one each I/O pin. For example, the ATmega328 supports up to 20mA. So it is
possible to power the
// board using I/O pins for power - so you can turn the board on and off (if you want to).
// FAULT and DRDY are not used by the library (see above)
#define SCK 3
#define CS
#define SDI 5
#define SDO 6
// MAX31856 Initial settings (see MAX31856.h and the MAX31856 datasheet)
// The default noise filter is 60Hz, suitable for the USA
#define
               CR0 INIT
                                         (CR0 AUTOMATIC CONVERSION
CR0_OPEN_CIRCUIT_FAULT_TYPE_K /* + CR0_NOISE_FILTER_50HZ */)
#define CR1 INIT (CR1 AVERAGE 2 SAMPLES + CR1 THERMOCOUPLE TYPE K)
#define
              MASK INIT
                                 (~(MASK VOLTAGE UNDER OVER FAULT
MASK THERMOCOUPLE OPEN FAULT))
MAX31856 *temperature;
void setup() {
 // Display temperatures using the serial port
 Serial.begin(9600);
 delay(3000);
 Serial.println("MAX31856 Sample application");
 // Define the pins used to communicate with the MAX31856
 temperature = new MAX31856(SDI, SDO, CS, SCK);
 // Initializing the MAX31855's registers
 temperature->writeRegister(REGISTER CR0, CR0 INIT);
 temperature->writeRegister(REGISTER CR1, CR1 INIT);
 temperature->writeRegister(REGISTER MASK, MASK INIT);
 // Wait for the first sample to be taken
 delay(200);
}
```

```
void loop () {
 float t;
 // Display the junction (IC) temperature
 // Sometimes the junction temperature is not provided until a thermocouple is attached
 t = temperature->readJunction(CELSIUS);
 Serial.print("Junction (IC) temperature =");
 printTemperature(t);
 // Display the thermocouple temperature
 t = temperature->readThermocouple(CELSIUS);
 Serial.print(" Thermocouple temperature = ");
 printTemperature(t);
 Serial.println();
 delay(1000);
}
// Print the temperature, or the type of fault
void printTemperature(double temperature) {
 switch ((int) temperature) {
  case FAULT_OPEN:
    Serial.print("FAULT OPEN");
   break;
  case FAULT VOLTAGE:
    Serial.print("FAULT_VOLTAGE");
   break:
  case NO MAX31856:
    Serial.print("NO_MAX31856");
   break;
  default:
    Serial.print(temperature);
   break;
 Serial.print(" ");
```

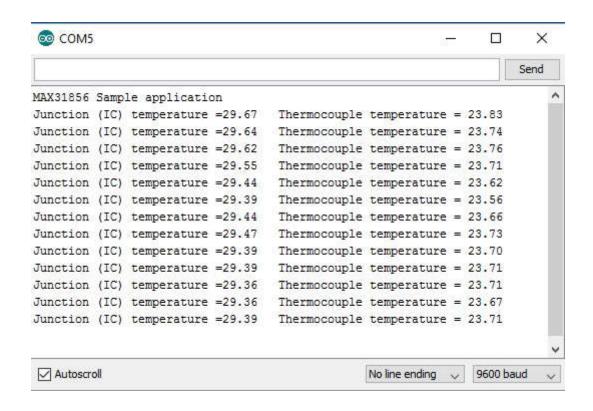

Figure 2. On the Serial monitor you can see the output of the Thermistor temperature sensor.
